

Proposal for Provincial Skills BC Precision Machining (Secondary)

If you have always wondered if Skills BC would hold a Secondary Provincial Precision Machining competition, please circulate the following message.

1. Skills BC needs a committee of interested secondary teachers to establish and plan a Skills BC Secondary Precision Machining competition. There is already a willing Technical Chair. Successful long running competitions are always run by committees of committed individuals that ensure broad consensus and succession planning.
2. Competition to take place in April, 2022. Competitions would likely occur at satellite locations which had sufficient equipment, the space and a sponsor teacher in order that a small group of competitors could be accommodated at each site.
3. As in Skills Canada Virtual National Competitions 2021 completed projects could be shipped to a central location for marking.
4. April 2022 would be a pilot year. A competitor from April 2023 Provincials would be entered into SCNC 2023 with the rest of Team BC.
5. Please reply to Jamie Maxwell at jmaxwell@skillscanada.bc.ca if you would like to be part of the discussion.
